ACADEMIC EXPERIENCE

Machine Learning Lab

Boston, MA

Northeastern University

Sep 2020 — Current

- Created SmoothHess, a geometrically intuitive method for interpreting neural network predictions through quantifying input feature interactions. SmoothHess was effectively applied to networks trained on real-world spirometry data as well as image benchmarks (**NeurIPS 2023**).
- Developed a method to quantify model explanation uncertainty using geodesics (**AISTATS 2024**).
- Collaborate with doctors at **Memorial Sloan Kettering Cancer Center** on deep learning methods for dermatology spanning fine-tuning multi-modal LLMs, self-supervised learning and anomaly detection.

Computational Imaging Group

St. Louis, MO

Washington University in St. Louis

May 2019 — Dec 2019

- Collaborated with radiologists to develop a self-supervised deep learning model which jointly transforms and denoises MRI data into brain iron maps (**Magnetic Resonance in Medicine (MRM)**).
- Mentored an undergraduate student in the lab for her senior thesis project.

WORK EXPERIENCE

Apple

Seattle, WA

ML Research Intern

May 2024 — Aug 2024

- Worked in the Data and Machine Learning Innovation team developing graph based LLM-in-the-loop applications as well as data valuation methods for LLMs.

iD Tech Camps

New York, NY

Instructor

July 2018 — Aug 2018

- Taught teenagers to create neural networks and familiarized them with basic machine learning practices.
